

G. LAKSHANYA KRISHNA

Full-Stack (MERN) Developer · Hyderabad, Telangana, India

+91-8143262204 · lakshanyakrishnagarigapati@gmail.com · github.com/Lakshanyakrishna · linkedin.com/in/lakshanya-krishna

SUMMARY

MERN-stack developer and B.Tech (AI & Data Science) student, currently a Software Development Intern at Fraylon Technologies working on a hackathon management platform and a learning management system (LMS). Also building BrandForge, an AI brand-kit and social-post generator that turns a text prompt into on-brand marketing creatives. Strong interest in AI-driven design and content-generation systems.

TECHNICAL SKILLS

Core (MERN): MongoDB, Express.js, React.js, Node.js, JavaScript (ES6+), REST APIs

Frontend: HTML, CSS, responsive design, Figma (UI/UX)

Languages & Databases: Python, Java, C · MySQL, PostgreSQL

Tools & AI: Git, GitHub, VS Code, Postman, prompt engineering, AI-assisted development

EXPERIENCE

Software Development Intern — Fraylon Technologies, Hyderabad (Remote) Jun 2026 – Present

- Develop full-stack (MERN) features for a **hackathon management platform** and a **learning management system (LMS)** — React UIs, Express REST APIs, JWT-based role access, and MongoDB data models.
- Ship work through a GitHub pull-request workflow with code reviews, collaborating with frontend, backend, and content interns on production-oriented deliverables.

Content Writer & Machine Learning Intern — St. Mary's Software Hub, Hyderabad [Month Year – Month Year]

- Created technical and branding content (including social-media creatives) for institutional projects, using AI tools and prompt engineering to accelerate content production.
- Worked with a team of interns and presented technical projects in a clear, accessible way to non-technical audiences.

PROJECTS

BrandForge — AI Brand Kit & Social Post Generator | *MERN, AI integration* [Live Demo](#) · [GitHub](#)

- Building an AI design-generation platform that turns a single text prompt into on-brand social-media creatives, enforcing saved brand guidelines (colour palette, fonts, tone of voice) through structured AI prompting.
- Extracts brand colours from uploaded logos automatically; designs render as dynamic React templates and export to PNG, with brand kits and generation history stored in MongoDB.

Learning Management System (LMS) | *MERN, role-based access — in progress* [GitHub](#)

- Developing a role-based LMS with a student dashboard, course progress tracking, mentor feedback, and assessments — separate views and permissions for students and mentors via JWT authentication and protected routes.

Hackathon Management Platform | *React.js, Node.js, PostgreSQL* [GitHub](#)

- Built a centralised platform covering participant onboarding, team formation, project-submission tracking, mentor assignment, event scheduling, and progress monitoring.

Getto — Quick-Commerce Clothing App (UI/UX Case Study) | *Figma*

- Designed a quick-commerce clothing app UI focused on faster delivery and higher cart value — nearby-store availability for quicker fulfilment and a “complete the look under a budget” upsell flow.

EDUCATION

B.Tech, Artificial Intelligence & Data Science — St. Mary's Engineering College, Hyderabad 2023 – 2027 (Expected)

CGPA: 8.43 / 10 · No active backlogs

Intermediate (MPC) — GITAM Junior College · 97.8% 2023

SSC — Kakatiya Group of Schools · CGPA 10 / 10 2021

LEADERSHIP & ACTIVITIES

- Industrial Representative (IR) and Sports Club Secretary, St. Mary's Engineering College; student volunteer contributing to internal branding and social-media content creation.
